The precision of an Adoock/Watson-Watt radio direction finding

The precision of an Adcock/Watson-Watt radio direction finding system in the computation of angles of arrival is estimated to be around 2-3 degrees 6. On the other hand, the system is not adequate for high frequency radio direction finding (HF/DF) for NVIS signals, due to the fact that the radiation patterns of the monopoles or dipoles employed have low gain for high takeoff angles 7.
