of the origin of igneous rocks that may have come from another misguided creationist source, Gentry (1988, p.130). Magma, not "underground lava," can solidify into granites, gabbros, syenites or numerous other intrusive igneous rocks. Extrusive igneous rocks not only include basalts, but also dacites, rhyolites, and many others. Igneous rocks may

of the Earth. The atmosphere is the "air layer" of the Earth.

Dimensions of the Earth -
mrsciguy

As the velocity increases the size of the particles transported will get bigger. (See chart in Handy Dandy Earth Science Reference Tables) Volume (amount of water flowing) is influenced by rainfall. The shape of a stream will determine where erosion will occur. The fastest water goes to the outside of the curve. The outside curve gets eroded away.
