Red Hat®Gluster Storage is an open, software-defined scale-out storage platform to easily manage unstructured data for physical, virtual, cloud, and container-based environments. Red Hat Gluster Storage combines both file and object storage with a scale-out architecture, designed to cost-effec- tively store and manage petabyte-scale data growth.

RED HAT GLUSTER STORAGE

Based on a stackable user space design, it delivers exceptional performance for diverse workloads and is a key building block of Red Hat Gluster Storage. The POSIX compatible glusterFS servers, which use XFS file system format to store data on disks, can be accessed using industry-standard access protocols including Network File System (NFS) and Server Message Block (SMB) (also known as CIFS).
